Amendments to the Specification:

Please amend the paragraph at column 3, lines 14-19 as follows:

The electrical energy produced is made available by the generator 14 by way of lines 20 to a transformer 22 which operates as an energy transfer unit. The transformer 22 feeds the transformed electrical energy by way of circuit breakers 24 into overland power lines 26. [he] The overland power [lands] lines 26 are suspended on masts 30 by way of insulators 28.

Please amend the paragraph at column 3, lines 20-29 as follows:

The transformer 22 is arranged directly at the pylon 4. The transformer 22 is disposed on a platform 32. At its end remote from the pylon the [transformed] <u>platform</u> 32 has a limiting wall 34. The platform 32 is disposed substantially at the height of the overland power lines 26 so that the fixing points 36 which serve above the circuit breakers 24 for fixing the overland power line 26 above the transformer 22 to the pylon 4 are disposed substantially at the same height as the insulators 28. In the illustrated embodiment therefore the pylon 4 also performs the function of a mast 30.
